

Basics of Design (II) 2 sem 6 ECTS

Form, function, structure, and the relationships between them in the process of shaping space. Using the composition of transformed forms to build structures with a specific character (multimedia space). Static spatial arrangements and dynamic spatial arrangements. Various forms of expression involving the perception and comprehension of content, the concretization of ideas, experimentation, and the relationships and interconnections of two-dimensional elements in works on a plane and three-dimensional elements in space, using traditional techniques combined with computer-based techniques.

Development of physical models made by hand, graphic records, photographs, and documentation of the work process in the form of boards presenting the project, displayed during presentations to the group.
